

# It Just Works!

The POS System that gets the job done

## POS Terminal

The heart of every POS system is how you enter an order, and the onePOS Front-of-House excels far above all other POS systems.

Combines over 20 years of real world usability experience with modern graphics and the industry's most intuitive touch interface, offering unmatched ease of use and performance that enhances every aspect of your operations. Countless hours have been spent minimizing touches and streamlining operations - every touch saved turns into hours of increased efficiency for your staff.

### Fast and Accurate to Use

onePOS provides you with the fastest service speed in the industry. Automatic modifier and side selection trains employees on your menu, while making guest requested modifications a snap, for both new and seasoned staff, and ensures your guests are correctly and consistently charged every time they visit. Conversational ordering allows servers to make changes to orders as they come up, and interactive close allows bartenders and cashiers to split checks on demand.

### Tool to Manage Effectively

Front-of-House flash reports keep managers informed of the performance of their restaurant in real time, from sales to labor to server performance. Automatic daily, weekly, and dining area based promotional capabilities give you tremendous opportunities for driving sales. And with onePOS' built-in redundancy, you are assured of having a smooth running, virtually bulletproof POS system, that you can count on every day, every night.

### iOS & Android Terminal

The full power of our Windows based Terminal software also runs natively on iOS and Android devices, both tablets and rugged POS stations - some even with built in EMV payment processing capabilities.

Mobile POS has tremendous value when used for line-busting during peak times in counter service or fast casual operations. It also allows servers to take drink and food orders directly from customers and have those orders immediately print at the bar, reducing turn around time by 5-10 minutes. Servers working outside patio areas can assist more tables and make more tips - without additional payroll expenses for you.

## Highlighted Features

- Table / guest naming - Great for identifying bar patrons.
- 15 levels of pricing - Automatically change by time of day, day of week, order screen, or dining area.
- Forced Modifiers - Require modifier selections and avoid mis-rings.
- Multiple Modifiers - Select an unlimited number of modifiers for each item.
- Split items - Allows an item's price to be distributed among several guests.
- Countdown / 86'd items - Keeps your staff informed of limited items and prevents mistakes.
- Track 86'd Modifiers as a Negative Item Count for inventory.
- PIN, scan card or biometrics for system access.
- Floating Beverage - Prohibit the transfer of non-printing items such as beverages.
- Transfer guests between checks, transfer checks between servers or join guest checks.
- Pre-authorize credit cards - Allows you to securely run bar tabs.
- View, Reprint or Re-open Closed Checks.
- Track Re-Opened Checks by Manager and Time.
- Print Job Throttling - Queue print jobs to be released at set intervals to the kitchen.
- Server or Cashier Banking - Even use both at the same time.
- Cook Times - Assign cook times to items and modifiers.
- Meal Coursing - Define the time between the ring of courses.
- Delayed Send.
- Integrated Time and Attendance - Computes hours, pay, and overtime automatically for multiple jobs.
- Real-Time Database Updates without interrupting system operation.
- Clock-In Message - Can be seen by each employee when they clock in, according to their Pay Category.
- Critical Item Type Ticket Flash Reporting - Provides cash reading which shows all open tickets by item type. Useful for tracking buffets or all you can eat checks.
