

It Just Works!

The POS System that gets the job done

oneSchedule

The onePOS oneSchedule solution provides intuitive, efficient ways to create, maintain, and distribute your employee schedules.

Assigning a shift is as easy as clicking the intersecting employee row and week day column and adding/updating shifts in the popup window. The ability to copy past schedules by week or day makes it super fast to maintain your employees' schedules. Shift collisions are handled properly so you do not have to worry about creating overlapping records. The filter/search options will filter the schedule by pay categories and departments, so you can rest assured that each job function receives adequate scheduling.

oneSchedule for Android and iPhone

Why bother with printed schedules when managers and employees can keep an eye on always up to date schedules, transfer shifts, and request time off with the oneSchedule app for Android and iPhone. The included phonebook lets a manager quickly get in touch with his or her employees. All shift transfer and time off requests can be approved by a manager from within the app or in the oneMetrix hybrid cloud solution.

Sales Projection with Labor Ratio

Control your sales/labor ratio easily with oneSchedule. With oneSchedule you can input projected sales along with desired labor ratio. As shifts are added to the schedule, color coding will inform you whether you are over/under your target labor ratio. Moreover, know the total spent on labor by day and week at a glance, and the average labor ratio by week.

Daily View

The Daily View allows more fine-grained control over shifts. Here you can adjust shift times by dragging or re-sizing shift lengths. You can even adjust multiple shifts in one go. This feature comes in handy if, for example, opening or closing times are changed.

Employee Unavailability

You can use the oneSchedule solution to add employee unavailability, so that you know when employees are out sick, on vacation or other type of leave. Then you do not need to worry about scheduling someone who is unavailable to work.

Reports

The employee schedule feature also includes various reports both in the cloud and within the back office product for viewing the schedule including filter criteria, so that you can view, save and print the schedules very easily.

Highlighted Features

- In-house scheduling application used to create, edit and add new employee schedule records in the oneMetrix cloud.
- Weekly and daily views available for adding/editing schedule records.
- Copy and merge schedule records so that replicating a prior schedule is efficiently performed.
- Publishing schedules in the oneMetrix cloud.
- Scheduling reports are available in the cloud and the back office product - both include filtering criteria.
- Allows user to add unavailability for employees to prohibit scheduling employees who are out of town, etc.
